**Today** – A thick layer of high clouds should hold in place much of this morning with some clearing expected this afternoon. Chances for any precipitation is rather low today with the frontal boundary to our south, however an isolated shower/T-storm can't be completely ruled out this afternoon. Temperatures should climb into the lower 70s today with northeast winds at 7-14 mph.

**Extended Forecast** – A complex of showers and T-storms are expected to be moving across the region Friday morning with additional development possible Friday afternoon/evening. There remains considerable uncertainty on how this evolves over the next 24 hours so confidence is somewhat low. Another complex of T-storms could develop overnight Friday, persisting into Saturday. Eventually, high pressure should push the front to our south on Sunday with drier conditions possible.
