**Today** – Dry conditions will occur this morning under sunny skies. A few showers and isolated thunderstorms may develop in the mountains this afternoon. Should this activity drift off the higher terrain, there is potential for erratic wind gusts in excess of 30 mph in the vicinity of evaporating showers/storms. Better chances for thunderstorms will be in place over northeastern Colorado, which may send gusty outflow boundaries back towards TPC Colorado later this afternoon – potentially allowing for an additional thunderstorm or two to develop. The temperature will top out around 93 degrees.

**Extended forecast** – Moisture will continue to build under a ridge of high pressure Friday and Saturday, allowing for afternoon storm coverage to ratchet up each day. Thunderstorms will become possible after 12-1pm each day, with the greatest coverage expected after 3-4pm. Slow storm motion may lead to locally heavy rainfall each day. Winds will become more erratic and gusty at times in the vicinity of these afternoon and evening thunderstorms.
