Today – Partly cloudy with a slight chance (10-20%) for a brief passing shower this morning into the early afternoon. Shower chances will rise slightly late this afternoon as moisture values begin to increase, but any shower that occurs should be fast-moving. Windy conditions are expected once again, becoming sustained at 16-23 mph with common gusts of 24-28 mph and a few higher peak gusts around 30 mph.

Rainfall through 6pm Friday: Less than 0.05"

Sunrise: 6:44am / Sunset: 6:28pm

Extended forecast – With moisture levels on the rise tonight expect scattered showers to become possible at times into Saturday morning. Expect a lull in activity from late Saturday morning into Saturday afternoon before another patch of moisture returns greater chances for showers late in the day. Scattered showers are then expected once again Saturday night into Sunday morning, with activity slightly diminishing in coverage into Sunday afternoon. These showers may produce moderate to briefly heavy rainfall intensities; however, the fast-moving nature of this activity will limit rainfall accumulations through the weekend. Breezy east-northeasterly winds are expected to become windy after 8-10am each day, becoming sustained between 17-23 mph with common gusts in the 25-30 mph range and a few higher peak gusts. The temperature will reach a high in the low 80s through the weekend.
