Lightning Probability	20%	25%	30%	45%	60%	30%
Temp (F)	63	65	68	70	72	70
Winds (mph)	S 5-10	S 6-12	S/SW 8-13	SW 10-15	SW 10-15	W/SW 6-12

Today – A band of rain and a few embedded thunderstorms is likely to focus 10-20 miles northwest of the course through the mid-morning hours, with a few showers and possibly a thunderstorm developing southeast of this area/closer to the course. Additional showers and thunderstorms will begin popping up to the west and northwest around midday, building to a scattered/broken line of thunderstorms that are expected to move through during the afternoon hours. The highest potential for thunderstorms is anticipated between 3-6pm. The coverage of precipitation should quickly diminish after 7pm as the system departs to the east and instability weakens.

Additional forecast rainfall through 8pm Thursday: 0.30" – 0.60", locally higher in thunderstorms.

Sunrise: 6:04am / Sunset: 8:57pm

Observed rainfall Wednesday & overnight: 0.35"

Day	Tonight	Fri AM	Fri PM	Sat	Sun
Sky					
Weather	Lingering showers diminishing	Partly cloudy	Mixed skies; isolated T-storm	Partly cloudy	Mostly sunny

Rain Amount (in)	<0.05"	0.00"	<0.10"	0.00"	0.00"
Temp (min/max)	Low: 59F	Low: 59F	High: 81F	60/85	62/88
Winds (mph)	W/SW 4-10	LV → W 3-8	W 5-10	Variable → SW 5-12	Variable → SW 4-10

Extended forecast – The heating of the day could provide enough destabilization for a pop-up thunderstorm or two Friday afternoon, otherwise expect dry conditions, light westerly winds, and temperatures topping out in the low 80s. Dry conditions are anticipated this weekend, with temperatures forecast to rise into the middle to upper 80s.

Forecast prepared by meteorologist Joe Halvorson.
