Winds (mph)	SSE 4-8	S 5-10	S 10-15	SSW 10-15	SSW 10-15	SSW 10-15

**Today** – Southerly wind will provide warmer and more humid conditions as we go through the day. This could provide just enough instability to produce an isolated shower or thunderstorm during the early evening hours. Showers and thunderstorms will become more likely after midnight as a low-pressure system moves into the Western Great Lakes. Otherwise, partly cloudy skies can be expected this afternoon with highs in the mid to upper 80s.

**Monday's forecast** – Scattered showers and thunderstorms will be possible through the morning before a lull in the precipitation is expected. Showers and thunderstorms will likely redevelop during the mid to late afternoon and continue into the evening hours. Otherwise, it will be a breezy and humid day with a southwest wind of 12-18 gusting to 25 mph at times.
