Today – A weak boundary will be positioned over the area throughout the day, and this could trigger very spotty shower/T-storm development. The first threat would be between 7-11am, with another threat later in the day, after 5-6pm. Otherwise, more clouds than sun can be expected with temperatures climbing into the lower 90s. While southerly winds are favored today, the proximity of the boundary could make winds erratic at times. Forecast rainfall: Less than 0.10". **Sunrise: 6:29am / Sunset: 8:29pm**

Extended forecast – Dry conditions are expected on Saturday with light winds and temperatures in the upper 80s. A more substantial threat for showers/T-storms likely develops on Sunday. While showers/T-storms could occur at any time on Sunday, the afternoon hours look the most favorable for development. Southerly winds will be in place with gusts over 15 mph.
