

## WEATHER FORECAST

Issued: 6am Friday, July 14, 2023

Time	8am	10am	12pm	2pm	4pm	7pm
Sky						
Weather	Mostly sunny	Mostly sunny; breezy	Partly cloudy	Isolated shower or T-storm	Few T-storms possible	T-storms possible; windy
Rain Probability	0%	0%	10%	20%	30%	35%
Lightning Probability	0%	0%	10%	20%	30%	35%
Temp (F)	70	78	82	84	82	78
Winds (mph)	N 7-12 G15	NE 10-15 G20	E/NE 8-14 G18	E 10-15 G20	E 8-14 G18	E/NE 15-20 G25-30

**Today** – Mostly sunny becoming a mix of sun and clouds in the afternoon. Isolated showers and thunderstorms will begin to develop in the early afternoon, but the highest chances are likely later in the afternoon or this evening as outflow boundaries from thunderstorm activity northeast of the course push back to the west-southwest. Northeasterly winds become breezy by 9-10am and turn east-northeasterly in the afternoon.

**Sunrise: 5:42am / Sunset: 8:30pm**

Day	Tonight	Saturday AM	Saturday PM	Sunday
Sky				
Weather	Scattered T-storms becoming isolated by 2am	Partly cloudy	Scattered T-storms after 12pm	Partly cloudy; isolated PM shower or thunderstorm
Rain Probability	50% → 20%	10%	50%	20%
Rain Amount (in)	< 0.20"	< 0.02"	< 0.20"	< 0.05"
Temp (min/max)	Low: 59°F	Low: 59°F	High: 81°F	58/90
Winds (mph)	E/NE → NW 7-15 → 3-10	NW → Variable 3-10	E 10-18 G20-25	N/NW → E 3-10 → 7-15 G20

**Extended forecast** – Temperatures cool into the low 80s Saturday as a high pressure ridge weakens and moisture increases. Scattered showers and thunderstorms are possible tonight but should become isolated by 2am Saturday. A scattered coverage of showers and thunderstorms will materialize after 12-1pm Saturday afternoon. As the ridge of high pressure begins to re-strengthen on Sunday anticipate that any threat for showers or storms will be isolated and confined to the late afternoon hours. Anticipate that light northwesterly or variable winds each morning will turn easterly and increase in speed each afternoon, occasionally gusting up to 20-25 mph. Although winds will primarily be from an easterly direction each afternoon, erratic outflow winds from any nearby showers/storms are likely to produce periods of gusty winds from various directions.
