

FRIDAY, JUNE 16, 2023 – 5 AM WEATHER FORECAST

Today is the first day of our potential warm up with more sunshine expected in basically every computer model this afternoon. First we'll have to wait through another gray morning under the marine layer. There is the threat of patchy fog or mist again early this morning, however it seems as though the clouds aren't low enough or thick enough to bother us with much of either. Skies will brighten at times, especially as we get closer to lunchtime with temps gradually rising through the 60s. Mostly cloudy conditions at 11 AM are supposed to flip over to mostly sunny skies around or after 2 PM this afternoon when we should finally climb into the low to maybe even mid 70s. Light and variable winds this morning will blow a bit more this afternoon when the sun comes out from the southwest at 5-10 mph with gusts in the 10-15 mph range. Fog is still a decent chance as we work our way through dawn Saturday, but we are forecast to quickly shift over to mostly sunny skies by lunchtime with temps making a run well into the 70s. That should cause southwest winds to pick up a little more than today, then we'll see a few more clouds Sunday.
