Today – Clear and dry conditions expected again throughout much of the day today with S'ly winds subtly increasing through the PM. As surface heating peaks between 1-4PM, a few localized gusts up near 17mph are possible with more general 8-12mph winds expected. A surface cold front will sag into the area late today between 6-8PM which could provide isolated shower/t-shower activity across the region, although this will remain very conditional. Accumulations, if any, will remain below 0.05".

Sunday – Cloud cover is expected to increase gradually throughout the day as a system begins to take shape off to the NW of the region. Developing S'ly winds will peak between 1-5PM with a few gusts over 20mph expected during the mid-afternoon. Some slight chance for light shower activity remains plausible throughout mid-day out ahead of a frontal boundary primed to move through overnight Sun into Mon AM. Seasonably warm temperatures will persist with PM highs in the mid-to-upper 80s.
