Extended forecast – A disturbance is expected to move across the Midwest late tonight into Fri morning, with activity beginning to threaten the area by mid-afternoon. Scattered showers out ahead of the main activity are possible by noon Fri with coverage of showers/storms beginning to increase through the evening. This disturbance and associated cold front will progress across central IL overnight into Sat morning with lingering precipitation possible through mid-day Sat. There is a threat for training storms Fri night into Sat which could lead to increased rainfall totals above 1", but confidence remains low for now on the threat for heavier accumulations.
