

# WEATHER FORECAST

Issued: 5:45am Thursday, July 11, 2024

Time	8am	10am	12pm	2pm	4pm	6pm
Sky						
Weather	Sunny	Sunny	Partly cloudy	Mix of sun and clouds	Vicinity shower or weak storm	Vicinity shower or weak storm
Rain Probability	0%	0%	0%	10%	20%	20%
Lightning Probability	0%	0%	0%	10%	20%	20%
Temp (°F)	67	80	90	94	95	91
Winds (mph)	N 4-8	Variable 3-7	E 7-12 G15	E/SE 10-15 G20	SE 10-15 G20	W 10-20 G25

**Today** – Sunny this morning becoming a mix of sun and clouds this afternoon as vicinity showers or weak thunderstorms develop across the Front Range. Anticipate light winds this morning will turn east-southeasterly at 7-15 mph along with gusts to 20 mph in the afternoon. Winds are expected to shift westerly after 5-6pm as outflow from showers evaporating to our west reaches TPC Colorado, becoming sustained at 10-20 mph along with gusts near 25 mph. **Forecast rainfall: Less than 0.05"** | **Sunrise: 5:41am / Sunset: 8:31pm**

Day	Friday	Saturday	Sunday
Sky			
Weather	Sunny to partly cloudy; isolated PM storm	Sunny to partly cloudy; isolated PM storm	Sunny to partly cloudy; isolated PM storm

Temp (min/max)	61/100	63/99	64/101
Winds (mph)	Var. → N/NW 5-10 → 10-15 G20	NW → NE 3-7 → 7-15 G20	NW → E/SE 3-7 → 7-15 G20

**Extended forecast** – A ridge of high pressure over the western United States will gradually drift eastward throughout the week, becoming centered over the Central Rockies Friday through Sunday. This ridge will bring increasing temperatures, with near-record highs forecast Friday through the weekend. A few vicinity showers or isolated thunderstorms cannot be ruled out this week, but this area of high pressure should work to suppress activity – keeping most precipitation well west of TPC Colorado and across the higher elevations of the Front Range. Anticipate northwesterly or variable winds in the morning Friday and Saturday with winds remaining northerly for the afternoon. Sunday will see light northwesterly winds in the morning shift east-southeasterly for the afternoon. Any isolated showers or thunderstorms that develop nearby may produce outflow winds of 30-40 mph from various directions. Confidence in the forecast direction of any of these outflow winds will remain low beyond 24 hours out.
