

FRIDAY, JUNE 14, 2024 – 11 AM WEATHER FORECAST

Drink plenty of water and hit the shade or air conditioning when possible this afternoon as the strong June sun will sizzle to start this afternoon causing temperatures to march into the lower half of the 90s. Eventually we'll get some cloud cover to mix with the scorching sunshine, however it will take longer than the last few days as our dewpoints are lower today in the 60s. We'll be monitoring the radar more closely to our northwest as the afternoon progresses since an approaching cold front will try to create a couple of showers and maybe a storm or two in the mountains. We enter the 20% chance bubble as we head past 5 PM with a 40% chance of a shower and 20% chance of a storm when sunset nears. Winds will be light and variable a lot the rest of the day, but occasionally will flex their muscle with a random 10 mph gust from the southwest or northwest possible a time or two. Ultimately we'll see the longest period with a 40% risk of showers overnight tonight, then the front passes at daybreak Saturday with north to northeast winds getting gusty. After the warmest start, temps will still try to surpass 90 degrees again tomorrow.
