

TUESDAY, JUNE 11, 2024 – 5 AM WEATHER FORECAST

After a quiet night we should see a pretty quiet day - with some subtle details. The trough that is finishing up its swing through the Mid-Atlantic only created a couple of showers to our well to our west and north overnight. There will be a few clouds drifting by Pinehurst early this morning that we'll leave a random 20% risk of a shower for and then around midday when the normal middle of the day cumulus clouds bubble up, we'll have a brief 20% chance of a rogue shower or rumble. Otherwise today is really going to spend a lot of time with a 0% chance of rain as the real activity on radar today is expected east of I-95 in eastern North Carolina. Temperatures will be allowed to warm up a touch more today getting further into the mid 80s then we got yesterday. Dewpoints with this trough are just above 60 degrees early this morning, then we'll see them drop back into the 50s this afternoon indicating relatively comfortable humidity levels. North winds will be up and down some today with a couple gusts over 10 mph at times. Wednesday looks almost as nice as today then we get hotter for Thursday into Friday.
