**Today** – Mostly sunny to start becoming a mix of sun and clouds in the afternoon with a high temperature in the low 80s. Southeasterly winds will become sustained at 15-20 mph by 9am, with common gusts around 25 mph and higher peak gusts near 30 mph possible for the rest of the day. A pop-up shower or two is possible today, with the highest chances from 12-4pm. Briefly heavy rainfall intensities cannot be ruled out, but the quick-moving nature of any showers that develop will limit daily total rainfall below 0.10". Low lightning probabilities (10% or less) are forecast within any pop-up showers that develop.
