

THURSDAY, JUNE 26, 2024 – USSO 5 AM Weather Forecast

Waking up to just over half an inch falling across the course early this morning with the majority of the accumulation between 2 - 5 AM. Light rain mixing with the marine layer as the winds lie down to start of the day will wreak havoc this morning as the boundary layer pushes eastward and winds become more west/southwest and the sun is able to break through this afternoon conditions will start to dry out. Highs and another bout with the marine layer are not out of the question this afternoon with the return of onshore winds just after lunch combining with the evaporating moisture from the overnight storms. This will all be dependent on how much we can warm up at the surface ahead of the drop in dewpoints late this after into Friday. Look for highs to top out in the mid 70s this afternoon under a mixture of sunshine and patchwork cloud cover with 3 PM once again looking to be that time the fog could be rolling in. Overnight, dewpoints plummet into the low 50s while a passing cold front shifts winds over to the N for FRI morning, limiting temps in the afternoon but drying us out from THU with winds becoming S in the afternoon.
