

## SATURDAY, JUNE 14, 2025 – 5 AM WEATHER FORECAST

Showers and thunderstorms pushed across southwest Pennsylvania during the evening and overnight hours dropping a grand total of 1.00" of rain. Ample cloud coverage today produces periods of additional showers this morning, particularly between 700 to 1000 AM with a few embedded rumbles not out of the question. Our temps will limp into the mid to upper 70s this afternoon as shower activity limits daytime heating. Current models indicate spotty showers and a few thunderstorms could develop throughout the afternoon thanks to the area of low pressure in the Ohio Valley. The hope is that we can settle into some gaps on the radar this afternoon, but like yesterday there will be some unfortunate spots that get heavier rains again today. Conditions overall look less active on Sunday with the primary rain chances holding off until the afternoon hours, however the exact timing and location development remains less than certain. Temps will once again reach the upper 70s and winds will gust over 10 mph at times, especially later in the day. Monday conditions improve when high pressure attempts to build across the area.
