

## FRIDAY, JUNE 26, 2025 - US SENIOR OPEN 5 PM WEATHER FORECAST

As goes this part of the world, near identical conditions leading to cells developing to our west miss us one day, not the next. Moisture values have taken the hint they are not wanted after we missed out on any accumulation with that storm passing by to our south as dewpoints remain firmly entrenched in the low 40s and could even dip down into the upper 30s before the sun sets. As those clouds chased after that strong cell moving away to our southeast this afternoon, more sunshine has been able to reach the surface heating us back up into the mid 80s this evening raising a slight concern for another round of cells taking advantage of that developing surface instability. Winds will remain from the southeast into early evening, transitioning over to the west then as temps fall back into the upper 70s. For Saturday, we get warmer just a fast as today and with moisture jumping up into the upper 40s mid morning, we remain ripe for another round of storms with the increased heat now the trigger ahead the drop in dewpoints for the afternoon as winds blow from the east/northeast at 7 - 9 mph gusting into the teens as heavier cloud hold above.
