Temp (min/max)	59/66	61/70	65/73	65/72	63/71
Winds (mph)	NNE 15-20 G 35	NE 14-18 G 30	NE 15-20 G30	NE 14-18 G28	NE 12-15 G25

Extended forecast– High pressure to the north, combined with upper-level energy moving across the gulf, will induce a trough off the coast that will remain stationary through the week. This will provide windy conditions across the region with gusts 25-35 mph at times with scattered on and off showers. Rain chances are forecast to increase late in the week as a low-pressure system forms along the trough and moves to the north. Rainfall may be heavy a times Thursday and Friday before the system begins to pull always on Saturday. Sunday looks to be the best day with mostly cloudy skies and drier conditions.

Forecast prepared by meteorologist Stewart Williams.
